

Chapter 1

Cognitive Psychology: An Introduction

26

Cognitive Science

- The scientific study of:
 - Thought
 - Language
 - The brain
 - The mind

28

Psyc 362 - Spring 2016

Memory

The mental process of acquiring and retaining information for later retrieval (Verb)

The mental storage system that enables these processes (Noun)

29

Psyc 362 - Spring 2016

Cognition

The collection of mental processes and activities used in perceiving, remembering, thinking, and understanding, as well as the act of using those processes.

30

Psyc 362 - Spring 2016

Thinking about Thinking

- Introspection
- Metacognition
- For next 3 questions, pay attention (as much as possible) to your internal thought processes...

31

Psyc 362 - Spring 2016

Thinking About Thinking Three examples:

- How many hands did Aristotle have?
- What is 723 divided by 6?
- Does a robin have wings?

32

Psyc 362 - Spring 2016

Intuitive Cognitive Analysis

Answer
question

represent	sentence	words	letters	shapes
possible	calculate	retrieve		
decide	compare	reason	situation	motivation
respond	speak	word	phoneme	

33

Psyc 362 - Spring 2016

Review

- Memory
- Cognition
- Thinking about Thinking
 - introspection
 - insight
 - metacognition
- Intuitive Cognitive Analysis

36

Psyc 362 - Spring 2016

Thinking About Thinking Three More examples:

- How many hands does Bon Jovi have?
- What is 623 divided by 6?
- Does a square have four sides?

37

Psyc 362 - Spring 2016

Intuitive Cognitive Analysis

- Your own perception of what it seems like your brain is doing combined with a logical analysis of what must be taking place.
- “Introspection” = first-person experience
- Task analysis = steps that must be occurring for task to be completed

38

Psyc 362 - Spring 2016

Intuitive Cognitive Analysis - Issues

- Some processes not available to conscious awareness - the Subconscious
- Reliability of first-person statements?
- Person-to-person variability?
- Only one way to complete a task?

39

Psyc 362 - Spring 2016

Summary of Cognitive Analysis (Overview of topics in this course by chapter)

Table 1-1 SUMMARY OF THE INTUITIVE COGNITIVE ANALYSIS

Processes	Topic and Chapter
Sensory and perceptual Focus eyes on print Encode and recognize printed material	Visual perception, sensory memory: Chapter 3 Pattern recognition, reading: Chapters 3 and 10
Memory and retrieval Look up and identify words in memory Retrieve word meanings	Memory retrieval: Chapters 5–8
Comprehension Combine word meanings to yield sentence meaning Evaluate sentence meaning, consider alternative meanings	Semantic retrieval, comprehension: Chapter 7–10 Comprehension: Chapters 9 and 10
Judgment and decision Retrieve answer to the question Determine reasonableness of question Judge speaker's intent and knowledge	Semantic retrieval: Chapters 8 and 9 Comprehension, conversation: Chapters 9 and 10 Decision making and reasoning: Chapter 11
Computational (Question 2) Retrieve fact knowledge Retrieve knowledge of how to divide and execute procedure	Semantic retrieval: Chapter 7 Procedural knowledge: Chapters 6, 11, and 12

40

Philosophical Considerations

- Mind = the entity that can process information and display intelligence
- Brain = the organ in your noggin
- Mind --> Brain?
- Brain --> Mind?
- Metaphysics : monism vs. dualism? Soul? Afterlife?
- Assumption : Mind = Brain = Mind

41

Psyc 362 - Spring 2016

Schools of Thought

- Philosophy
 - Aristotle and Tabula Rasa
 - Plato
- Psychology
 - Wilhelm Wundt and Introspection
 - Edward Titchener and Structuralism
 - Herman Ebbinghaus, the father of human memory research.
 - William James and Functionalism

42

Psyc 362 - Spring 2016

Plato : Phaedrus
370 BCE

43

Soc: Thamus replied: [...] for this discovery of yours will create forgetfulness in the learners' souls, because they will not use their memories; they will trust to the external written characters and not remember of themselves. The specific which you have discovered is an aid not to memory, but to reminiscence, and you give your disciples not truth, but only the semblance of truth; **they will be hearers of many things and will have learned nothing**; they will appear to be omniscient and will generally know nothing; they will be tiresome company, having the show of wisdom without the reality.

Aristotle: De Memoria
350 BCE

44

Memory is, therefore, neither Perception nor Conception, but a state or affection of one of these, conditioned by lapse of time. As already observed, there is no such thing as memory of the present while present, for the present is object only of perception, and the future, of expectation, but the object of memory is the past. **All memory, therefore, implies a time elapsed; consequently only those animals which perceive time remember, and the organ whereby they perceive time is also that whereby they remember.**

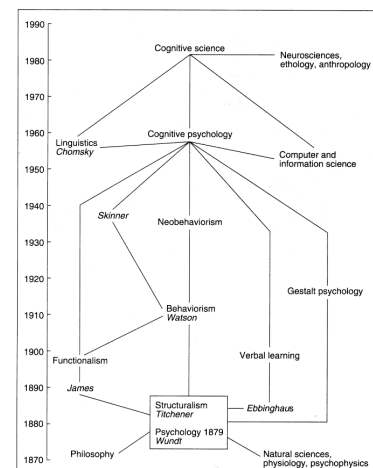

Descartes : Principles of
Philosophy (17th century)

45

VII. That we cannot doubt of our existence while we doubt, and that this is the first knowledge we acquire when we philosophize in order. While we thus reject all of which we can entertain the smallest doubt, and even imagine that it is false, we easily indeed suppose that there is neither God, nor sky, nor bodies, and that we ourselves even have neither hands nor feet, nor, finally, a body; but we cannot in the same way suppose that we are not while we doubt of the truth of these things; for there is a repugnance in conceiving that what thinks does not exist at the very time when it thinks. Accordingly, the knowledge, I think, therefore I am, is the first and most certain that occurs to one who philosophizes orderly.

History of Cognitive Psychology

46

History of Cognitive Psychology

- Wilhelm Wundt
 - German physiologist
 - Established as own science
 - Introspection
- Topics:
 - “conscious processes and immediate experience”

47

History of Cognitive Psychology

- Edward Titchner
 - 1st School of Thought
 - Structuralism
- Methods
 - rigorously trained introspection

48

History of Cognitive Psychology

- Hermann von Ebbinghaus
 - Father of Memory Research
- Savings Score

49

History of Cognitive Psychology

- William James
 - 2nd School of Thought
 - Functionalism

50

Behaviorism

- John Watson
 - Founder of Behaviorism
 - Observable Behaviors
 - No Mental Processes

53

Behaviorism

- John Watson, the founder of behaviorism
- A response to Wundt's introspection
- The scientific study of observable behavior only
- Since mental processes can't be seen, they have no place in psychology
- Behaviorism is “antimentalistic”
- Modern Evaluation?
 - methodological rigor was needed
 - antimentalism was an overreaction

54

Challenges to Behaviorism

- “The Misbehavior of Organisms”
- World War II
- Verbal learning
- Linguistics-- Chomsky versus Skinner
- The mind/computer analogy-- humans are information processors too
- Telecommunication analogies...

55

Psyc 362 - Spring 2016

“Misbehavior” of organisms

56

Psyc 362 - Spring 2016

Verbal Learning

- Evidence of meaning in “nonsense” syllables
- Semantic Clustering of recall

58

Psyc 362 - Spring 2016

Linguistics

- Linguistics-- Chomsky versus Skinner
- “Skinnerism is the final philosophic statement of the puritanical protestant-ethic manipulators who dominated the world for 400 years up to Hiroshima” (Leary, 1977)

59

Psyc 362 - Spring 2016

Computers - Von Neumann Architecture

- The mind/computer analogy-- humans are information processors too

- Modular, sequential design with serial stages of processing
- Perhaps the brain is structured similarly and works the same way?
- Or do we have it backwards?

60

Channel Capacity

- Limited Capacity
- Bandwidth

61

Psyc 362 - Spring 2016

Assumptions of Cognitive Psychology

- Mental processes exist!
- Mental processes can be studied scientifically (by using speed or accuracy as DV's).
- Human beings are active information processors.
- Humans are not necessarily special : it should be possible to deconstruct and reconstruct mental processes in other substrates (e.g. a computer)

62

Psyc 362 - Spring 2016

Methods

- Time
- Accuracy

68

Psyc 362 - Spring 2016

Reaction Time

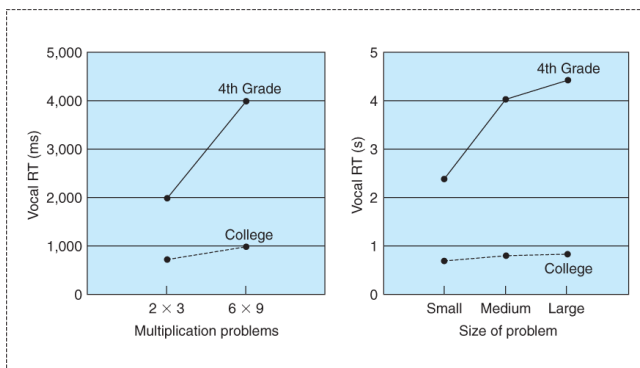

Figure 1-2
Vocal response times (RTs) to multiplication problems.

69

Psyc 362 - Spring 2016

CogLab: Partial Report

- “Perceptual Span” : how many items could be seen with a “brief exposure”
- Research suggested about 4.5
- George Sperling (1960)
 - “more than is seen than can be remembered”
- Problem: report is too slow
- Solution: partial report

70

Psyc 362 - Spring 2016

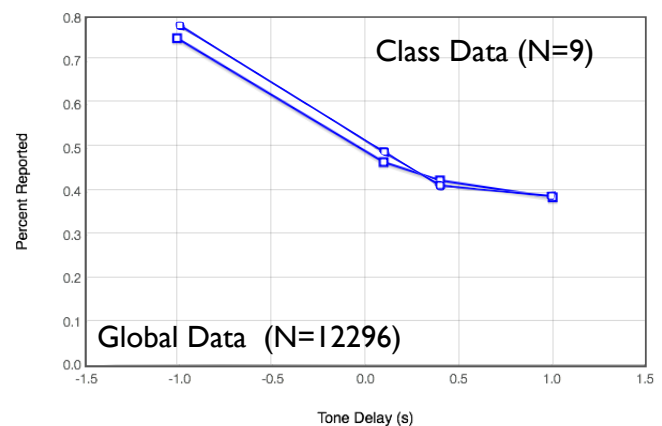

CogLab: Partial Report

73

Psyc 362 - Spring 2016

CogLab: Partial Report

74

Psyc 362 - Spring 2016

CogLab: Partial Report

- Debriefing
- Methods?
- Predictions?
- Robust? Limitations?

75

Psyc 362 - Spring 2016

Ecological Validity

- Neisser's term for the degree to which our lab tasks resemble "real world" cognition.
- Also called External Validity.

76

Psyc 362 - Spring 2016

The Reductionist Approach

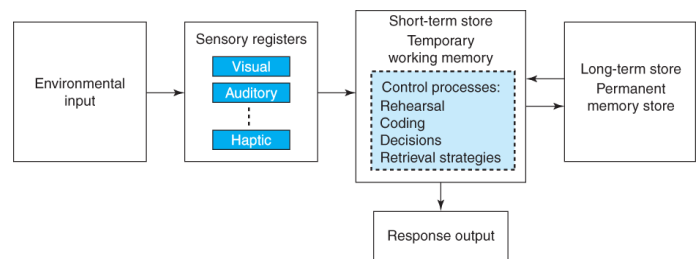

An attempt to understand complex events by breaking them down into their components.

77

Psyc 362 - Spring 2016

Information Processing and Cognitive Science

- Atkinson Shiffrin "Standard Model" aka "Standard Theory"

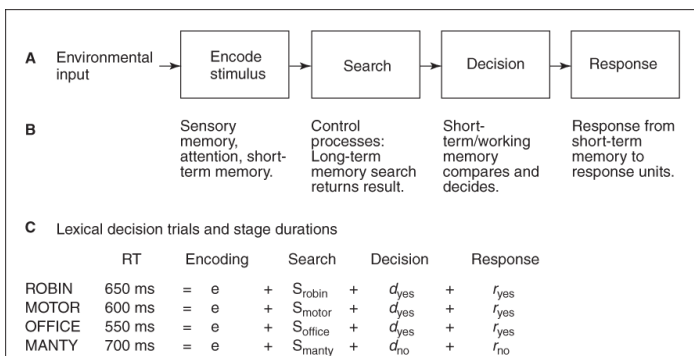

78

Psyc 362 - Spring 2016

Process Model (Sternberg)

- Lexical Decision Task

79

Psyc 362 - Spring 2016

Process Model

- Assumptions
 - Sequential Stages
 - Independent and Non-overlapping
- Challenges
 - Example: Typing (4 stages) - parallel processing
 - Context Effects (Priming)
 - faster to ID "MOTOR" 2nd time

80

Psyc 362 - Spring 2016

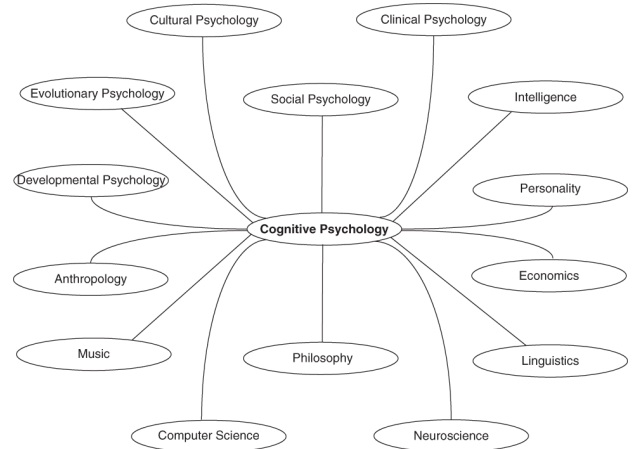

Ideas

- Parallel Processing
- Non-independence
- Bidirectional influence
- Hierarchy

81

Psyc 362 - Spring 2016

Cognitive Psychology

82

Psyc 362 - Spring 2016

Summary of Major Topics Covered in Chapter 1

- Thinking about thinking
- Memory and cognition defined
- History of Cognitive Psychology
- Cognitive psychology and information processing.

83

Psyc 362 - Spring 2016

Seven Themes of Cognition

- Attention
- Data-Driven vs. Conceptually Driven
- Representation
- Implicit vs. Explicit
- Metacognition
- Brain
- Embodiment

84

Psyc 362 - Spring 2016
