Why use tests?

Goal: measure Piloting Skills

Test Flight:
Does the pilot crash?

vs.

Paper & Pencil Test:
High Score?

40

Psychology 402 - Spring 2020 - Dr. Michael Diehr

Why use tests?

- Why use tests? vs. the alternative -- just measure the thing directly
 - faster - saves time
 - more convenient, portable, virtual
 - standardize across space & time
 - less dangerous (e.g. brain surgeon)
 - more accurate(?)
 - \$\$\$ profit

41

Psychology 402 - Spring 2020 - Dr. Michael Diehr

Arguments against testing

- UnReliable -- inconsistent results
- InValid -- doesn't measure what it claims
- Biased -- treats sub groups differently
- Enforced conformity -- punishes creativity
- People & Institutions adapt -- "study for the test", specialized tutoring
- Expensive -- few large private companies hold most of the business
- Privacy & Security & Cheating

Gold, silver, brass & iron

“Citizens, we shall say to them in our tale, you are brothers, yet God has framed you differently. Some of you have the power of command, and in the composition of these he has mingled gold, wherefore also they have the greatest honor; others he has made of silver, to be auxiliaries; others again who are to be husbandmen and craftsmen he has composed of brass and iron; and the species will generally be preserved in the children. But as all are of the same original stock, a golden parent will sometimes have a silver son, or a silver parent a golden son.”

-- Plato, *The Republic*, circa 380 BC

Racial Attitudes of the 1800s

“[...]There is a physical difference between the white and black races which I believe will forever forbid the two races living together on terms of social and political equality. And inasmuch as they cannot so live, while they do remain together there must be the position of superior and inferior, and I as much as any other man am in favor of having the superior position assigned to the white race.”

-- 1858, in a debate with Stephen Douglas

Abraham Lincoln

Taxonomy

Species

- Old definition:
 - group of organisms that can breed

 - “Species are actual or potential interbreeding populations sharing common gene pool, reproductively isolated from other groups.”
- Example:
