## 4 Kinds of Reliability

	Description	Name	Statistic
<b>Time Sampling</b>	1 test given two times	test-retest reliability	correlation between scores at two times
<b>Item Sampling</b>	2 different tests given once	Alternate or Parallel forms	correlation between scores on 2 versions
<b>Internal Consistency</b>	One test, multiple items	Split Half or internal reliability	Cronbach's Alpha
<b>Observer Differences</b>	One test w/ 2+ observers	inter-observer reliability	Kappa

## 4 Kinds of Validity

	Description	Notes	Statistic
<b>Face</b>	do items "look" valid?	informal, improper, non-scientific	none
<b>Content</b>	do test questions cover the topic?	logic & judgement - there are no stats to calculate	none
<b>Criterion</b>	does the test predict a specific event?	requires a well-defined criteria	Pearson's R (correlation) between Test and Criteria
<b>Construct</b>	does the test measure what it claims	modern theory: all validity is Construct validity	Convergent and Divergent correlations (Pearson's R)
