

## Ch. 14: Projective Testing

- Review of test design patterns
- The Projective Hypothesis
- Projective Tests
  - Rorschach Inkblot Test
  - The TAT

1291

Psychology 402 - Fall 2021 - Dr. Michael Dohr

## Review

- IQ / Race
- The 4 Claims of *The Bell Curve*
- Policy / Politics
  - Remediation
  - Selection Philosophy

1293

Psychology 402 - Fall 2021 - Dr. Michael Dohr

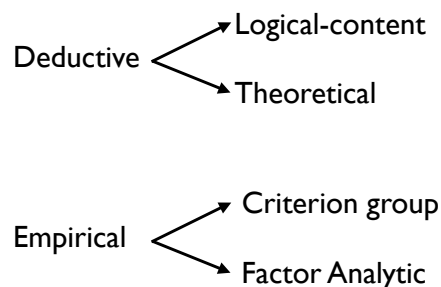

## Certifiably Sane

- Psychologist: “The Rorschach is a projective psychological test that contains 10 cards with inkblots on them...The subject is shown each of the cards one at a time and [states] what the inkblot might be”
- Attorney: “You mean to say that you can tell whether a person is sane or insane by the way he or she interprets 10 black, gray and variously colored inkblots?”

1294

Psychology 402 - Fall 2021 - Dr. Michael Dohr

## Design Theories

1295

Psychology 402 - Fall 2021 - Dr. Michael Dohr

## Design Theories

- Deductive (aka “Top Down” or “Theory-driven”)
  - Use reason, clinical experience and common sense to choose test items that are face-valid.
- Empirical (aka “Bottom-Up” or “Data-driven”)
  - Look for patterns in large groups of data
  - Data tells us what factors exist
  - Don’t assume face validity

1296

Psychology 402 - Fall 2021 - Dr. Michael Dohr

## Stimuli vs. Response

- Objective vs. Subjective
  - stimuli
  - expected responses / response choices

1297

Psychology 402 - Fall 2021 - Dr. Michael Dohr

# The Projective Hypothesis

- Given ambiguous stimuli, responses will reflect a subject's
  - needs
  - cognitive schemas

1298

Psychology 402 - Fall 2021 - Dr. Michael Diehr

1299

## Ambiguous Stimuli

- Leonardo da Vinci
  - used to assess his students

Psychology 402 - Fall 2021 - Dr. Michael Diehr

## Inkblot History

- Inkblots originally proposed for *Personality* assessment by Alfred Binet - Whipple (1910) created first test.
- Rorschach changed test to assess *Psychopathology* (mental illness)

1300

Psychology 402 - Fall 2021 - Dr. Michael Diehr

## Rorschach 1

1301

Psychology 402 - Fall 2021 - Dr. Michael Diehr

## Rorschach Inkblot Test

- 10 cards
- Two phases:
  - free association : “what might this be?”
  - inquiry: determine why subject saw that
- Tester gives as little feedback as possible: remains vague, neutral, ambiguous
- Test is atheoretical

1302

Psychology 402 - Fall 2021 - Dr. Michael Diehr

## Rorschach History

- Hermann's death led to difficult history
- Five disciples each with different scoring system
- Studies in the 1950s and 1960s began to debunk the Rorschach in controlled double-blind studies
- Exner began to develop his system in response

1304

Psychology 402 - Fall 2021 - Dr. Michael Diehr

## Barnum Effect

- Named after P.T. Barnum “We’ve got something for everyone”
- “There’s a sucker born every minute” - David Hannum, in criticism of Barnum.
- aka Forer Effect
- Forer, 1948:
  - Provide personality profile to students
  - Students rated accuracy: 4.26 out of 5 (between *very good* and *excellent* match)

1312

Psychology 402 - Fall 2021 - Dr. Michael Dohr

## Forer Profile

- 1 You have a great need for other people to like and admire you.
  - 2 You have a tendency to be critical of yourself.
  - 3 You have a great deal of unused capacity which you have not turned to your advantage.
  - 4 While you have some personality weaknesses, you are generally able to compensate for them.
  - 5 Your sexual adjustment has presented problems for you.
- [...]

1313

Psychology 402 - Fall 2021 - Dr. Michael Dohr

## Rorschach Claims

- Expert examiners can make predictions of “miraculous” accuracy
- Predictions hard to test
- Explained by the Barnum or Forer Effect?

1314

Psychology 402 - Fall 2021 - Dr. Michael Dohr

## Rorschach Scoring

- Exner’s Comprehensive system
- Responses scored on 5 dimensions:
  - Location
    - W(hole), D(etail), Dd(unusual detail)
  - Determinant
    - F(orm), M(ovement-human), FM(animal), m(inanimate), C(olor), T(shading)
  - Form quality : F+, F, F-
  - Content : H(uman), A(nimal), N(ature)
  - Frequency (popularity of response)

1315

Psychology 402 - Fall 2021 - Dr. Michael Dohr

## Rorschach Theory vs. Data

- Determinant : cooperative movement
- Hypothesis : subjects giving these responses are fun, trustworthy
- Data: study of 20 sexual psychopathic murders, over 70% gave such answers

1316

Psychology 402 - Fall 2021 - Dr. Michael Dohr

## Rorschach Controversy

- Test Remains controversial
- Administration not standardized
- Reliability coefficients not established
- Validity
  - lack of relationship to psychological diagnoses
  - 50% of above average IQ children diagnosed with social/cognitive impairments (Erard 2005)
  - lack of incremental validity (e.g. in addition to MMPI)

1317

Psychology 402 - Fall 2021 - Dr. Michael Dohr

## Rorschach Controversy 2

- Test has not shown to be Reliable or Valid
- Still a widely used clinical test
- Wide range of opinions:
  - “Perhaps the most powerful psychometric instrument ever envisioned” (BPA, 1998)
  - “...bears a charming resemblance to a party game” (Wood et al, 2003)
  - “[should be] banned in clinical and forensic settings” (Garb, 1999)

1318

Psychology 402 - Fall 2021 - Dr. Michael Dohr

## Rorschach Controversy 3

- Professionals suffering from overconfidence?
  - Similarity to Lie Detector Tests?
  - FBI hair analysis...

1319

Psychology 402 - Fall 2021 - Dr. Michael Dohr

## TAT

1322

Psychology 402 - Fall 2021 - Dr. Michael Dohr

## Thematic Apperception Test

- Similar to Rorschach in some ways
- Questions about reliability and validity
- Administration & Scoring is not well standardized
  - too many scoring systems
  - most clinicians use no scoring system at all!
- However, somewhat less controversial than Rorschach
  - made fewer claims
  - did not “oversell” its abilities
  - Based on a theory (Murray’s 28 human needs)

1323

Psychology 402 - Fall 2021 - Dr. Michael Dohr

## TAT : Lindzey’s assumptions 1

- Subject identifies with one “hero”
- Subject’s issues may be represented symbolically
- Not all stories are important
- Themes from stimuli less relevant than themes from subject
- Recurrent themes important
- Themes may be short or long term

1324

Psychology 402 - Fall 2021 - Dr. Michael Dohr

## TAT : Lindzey’s assumptions 2

- Stories may represent third-hand material; but selection is important
- Stories may reflect sociocultural factors
- Disposition and Conflicts in stories may be unconscious

1325

Psychology 402 - Fall 2021 - Dr. Michael Dohr

## Rorschach vs. TAT

Rorschach	TAT
Rejected by many scientists	more accepted
Atheoretical	Murray's (1938) theory of needs
Oversold / extravagant claims	Humble claims
Claims to be diagnostic	not diagnostic
Clinical use	Clinical and non-clinical use

1326

Psychology 402 - Fall 2021 - Dr. Michael Diefz

## Projective Testing : Conclusions

- Projective tests are controversial yet widely used
- Objectively, have poor psychometrics: Reliability, Validity, Standardization & Norms
- Subjectively, they feel impressive
- Recommendations:
  - do not oversell results
  - use only to generate *hypotheses*
  - part of a larger assessment

1327

Psychology 402 - Fall 2021 - Dr. Michael Diefz
