Psychology 402 - Fall 2024 - Dr. Michael Diehr

## Review : Design Theories

1414

Psychology 402 - Fall 2024 - Dr. Michael Diehr

## Intelligence

- The problem of defining “Intelligence”
- Binet’s Principles of Test Construction
  - Age differentiation
  - General mental ability
- General Mental Ability
  - g
  - gf - gc theory
- Multiple intelligences
  - autism, savantism
- The modern Stanford-Binet IQ test

1415

Psychology 402 - Fall 2024 - Dr. Michael Diehr

## What is “Intelligence”

- Everyone knows but nobody (even scientists) can agree
- Statistical advances often came before theoretical ones
- Confusion between Observed score (IQ) vs. True score (construct of intelligence)
- Controversy : wealth, race, gender, class, genetics, freedom, destiny...

1416

Psychology 402 - Fall 2024 - Dr. Michael Diehr

## Background Intelligence

- Intelligence : from latin “intelligere” meaning “to understand”
- Dictionary: “capacity for learning, reasoning, understanding, and similar forms of mental activity; aptitude in grasping truths, relationships, facts, meanings, etc.”
- Same as “smart”, “crafty”, or “clever”?
- Uniquely Human?
- Requires Thought?
- Requires Language?

1417

Psychology 402 - Fall 2024 - Dr. Michael Diehr

## Definitions

- Binet: “tendency to maintain a definite direction; the capacity to make adaptations for the purpose of attaining a desired end, and the power of autocriticism”
- Spearman: ability to deduce either relations or correlates
- Gardner: “to resolve genuine problems or difficulties as they are encountered”

1418

Psychology 402 - Fall 2024 - Dr. Michael Doherty

## Intelligence (APA, 1995)

Individuals differ from one another in their ability to **understand** complex ideas, to **adapt effectively** to the environment, to **learn** from experience, to **engage** in various forms of reasoning, to **overcome obstacles** by taking thought. Although these individual differences can be substantial, they are never entirely consistent: a given person's intellectual performance will vary on different occasions, in different domains, as judged by different criteria. Concepts of "intelligence" are attempts to clarify and organize this complex set of phenomena.

1419

Psychology 402 - Fall 2024 - Dr. Michael Doherty

## Early History

- Formal testing started in 1904 in France.
- Commission formed with goal of identifying intellectually limited individuals for special educational treatment
- Foremost problem was that of defining Intelligence

1420

Psychology 402 - Fall 2024 - Dr. Michael Doherty

## Man of Irony

- IQ tests designed to help the lower class / poor, uneducated, sick
- IQ tests show lower performance
- Used to *justify* unequal treatment

1421

Psychology 402 - Fall 2024 - Dr. Michael Doherty

## Binet's Principles 1

- Principle 1: Age Differentiation
  - Kids get smarter as they get older
  - Test items designed to be answerable by
    - 67% to 75% at the target age
    - higher % at older
    - lower % for younger
  - Mental Age corresponds to level of average performance for a given age

1422

Psychology 402 - Fall 2024 - Dr. Michael Doherty

## Binet's Principles 2

- Principle 2: General Mental Ability
  - Instead of trying to measure the parts that make up the whole, decided to just measure the whole
  - Solved a lot of theoretical and practical questions
  - Is this a circular argument or design?

1423

Psychology 402 - Fall 2024 - Dr. Michael Doherty

## Spearman's g

- Intelligence composed of
  - General Factor (g)
  - Specific Factors ( $S_1, S_2, S_3, \dots S_n$ )
- Observation: All measures of intelligence, even on seemingly unrelated subjects, have a positive correlation. No items that “smarter” people do worse on.
- Factor Analysis: From a large number of items (Xs) deduce a smaller number of Factors (Fs) which share variance
  - Shared variance = g = about 50%

1424

Psychology 402 - Fall 2024 - Dr. Michael Dohr

## Spearman's model

1425

Psychology 402 - Fall 2024 - Dr. Michael Dohr

## Improving on g

- Although factor analysis shows large “g” factor, other factor solutions are possible
- Two-factor model: more modern approach
  - gf - “fluid”
    - reasoning ability, mental flexibility, executive functioning, problem solving, ability to learn
  - gc - “crystallized”
    - facts, figures, information, acquired knowledge that has been learned

1426

Psychology 402 - Fall 2024 - Dr. Michael Dohr

## Alfred Binet (MMoM Ch. 5)

- Director of the Sorbonne Psychology Laboratory
- Originally believer in Cranial Volume (Cranimetry)
- Ran his own experiments
  - Results were statistically significant (smarter students had bigger heads)
  - Smarter students were also taller.
  - Difference in skull sizes (the effect size) was trivial
- Decided to measure behavior instead

1427

Psychology 402 - Fall 2024 - Dr. Michael Dohr

## Binet's Metacognition

- “I feared that in making measurements on heads with the intention of finding a difference in volume [...] I would be led to increase, unconsciously and in good faith, the cephalic volume of intelligent heads and to decrease that of un-intelligent heads”

1428

Psychology 402 - Fall 2024 - Dr. Michael Dohr

## Binet's Pragmatism

- “It matters very little what the tests are, so long as they are numerous”
- Chose practical “everyday” tasks

1429

Psychology 402 - Fall 2024 - Dr. Michael Dohr

## Binet on Ranking

- “The [IQ] scale, properly speaking, does not permit the measure of the intelligence, because intellectual qualities are not superposable, and therefore cannot be measured as linear surfaces are measured”

1430

Psychology 402 - Fall 2024 - Dr. Michael Dohr

## Binet on Determinism

- (After finding that retarded students scored better after special classwork)
- “[...]in the practical sense[...] the intelligence of these children has been increased. We have increased what constitutes the intelligence of a pupil: the capacity to learn and assimilate instruction”

1431

Psychology 402 - Fall 2024 - Dr. Michael Dohr

## Binet's Principles

- 1. IQ scores are practical - they have no theoretical basis - they do not measure “intelligence”
- 2. IQ scores are for identifying mildly retarded and learning-disabled children
- 3. Low IQ scores can be improved with special training.

1432

Psychology 402 - Fall 2024 - Dr. Michael Dohr

## Stanford Binet Early

- Binet developed first modern IQ test
- Goal - identify developmentally disabled students for special education
- Major revisions have made it into a modern test:
  - 1905 First version : 30 questions, Age Scale format
    - “Idiot”, “Imbecile”, “Moron”
  - 1908 Revision:
    - Mental Age

1433

Psychology 402 - Fall 2024 - Dr. Michael Dohr

## Stanford Binet 1916-1986

- 1916 Revision: Stanford-Binet
  - $IQ = MA/CA$
- 1937 Revision:
  - Improved standardization sample (but still mainly urban-dwelling USA Caucasians)
  - Good psychometrics (though less reliable for younger ages and higher IQs)
- 1960 Revision
  - Deviation IQ with mean of 100 and SD of 16
- 1986 Revision -- some changes (later backtracked)

1434

Psychology 402 - Fall 2024 - Dr. Michael Dohr

## Stanford Binet 5 (2003)

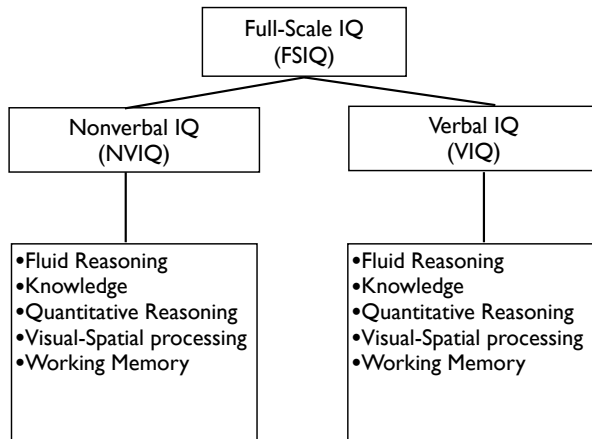

- 5 Factors / 10 verbal/nonverbal subtests: Fluid Reasoning, Knowledge, Quantitative Reasoning, Visual/Spatial Reasoning, Working Memory.
- Full-Scale IQ (FSIQ)  $r = .97$ 
  - Verbal IQ (VIQ)  $r = .96$
  - Non-Verbal IQ (NVIQ)  $r = .95$
- Finally uses SD = 15 (instead of 16)
- Excellent normative sample (n=4800 gender, ethnicity, region, education level, plus 3000 from subpopulations: gifted, ADHD, etc.)

1436

Psychology 402 - Fall 2024 - Dr. Michael Dohr

## Stanford-Binet 5

1437

Psychology 402 - Fall 2024 - Dr. Michael Dohr

## Subtests: Fluid Reasoning

- Verbal  
Explain what's wrong with the sentence  
"I put ink on my hairbrush and cleaned my teeth"
- Visual - Matrices

1439

Psychology 402 - Fall 2024 - Dr. Michael Dohr

## Subtests: Working Memory

- Verbal - sentence memory  
*Remember the last word of each sentence:*  
"The man went to the store"  
"A large elephant wanted more peanuts"  
...

- Visual - Block tapping test

1440

Psychology 402 - Fall 2024 - Dr. Michael Dohr

## Review

- Intelligence : How many factors?
- IQ : does it measure Intelligence?
- IQ tests
  - 1905 - 1908 Alfred Binet
  - 1916 to present : Stanford-Binet IQ test
    - 1, 2, 5 or 10 factors

1446

Psychology 402 - Fall 2024 - Dr. Michael Dohr

## Limitations of g

- Did the test methodology and techniques used to collect data overly influence the theory?
- Early tests were primarily of language, facts, figures, calculations and manipulation of objects
- Many areas not tested:
  - kinesthetic
  - social
  - musical
  - non-verbal thought
  - etc

1447

Psychology 402 - Fall 2024 - Dr. Michael Dohr

## Gardner's Research

- Do we learn more about the design and structure of a system when it is working normally, or functioning unusually? Often, best information comes from unusual cases
- Gardner considered
  - neurological evidence (brain damage patterns)
  - prodigies, virtuosos, savants, autists
  - evolution
  - psychometrics
  - existence of symbolic notation

1448

Psychology 402 - Fall 2024 - Dr. Michael Dohr

## Autism / Savantism

- Autism
  - spectrum of disorders characterized by impaired social interaction, restricted interests, obsessions, and repetitive behavior
- Prevalence 1-2 out of 1000
- Savant Syndrome
  - One or more areas of mental brilliance or excellence.
  - About 50% are autistic, about 50% have developmental disorder, mental retardation, brain injury or disease
  - Very rare: perhaps 100 worldwide

1450

Psychology 402 - Fall 2024 - Dr. Michael Dohr

## Stephen Wiltshire

- Diagnosed autistic at age 3
  - mute until age 5
  - first words “paper” and “pencil”
  - full language developed by age 9 (but still limited)

1451

Psychology 402 - Fall 2024 - Dr. Michael Dohr

## Daniel Tammet

- seizure disorder as young child
- diagnosed with Asperger’s Syndrome
- digit span over 11
- memory for faces only 7-year old level
- can do enormous calculations
- recited 25,000 digits of  $\pi$

1454

Psychology 402 - Fall 2024 - Dr. Michael Dohr

## Digit Span

1456

Psychology 402 - Fall 2024 - Dr. Michael Dohr

## Kim Peek

- Diagnosed severely retarded
- Movie “Rain Man” based on him
- Amazing memory for fact and figures
- Severe physical and social disabilities
- Reads 8-10 books/day, retains 98% of the information, can read two pages at once (one with each eye)

1460

Psychology 402 - Fall 2024 - Dr. Michael Dohr

## Twins Flo & Kay

- Identical twin autistic / savant twins

1462

Psychology 402 - Fall 2024 - Dr. Michael Dohr

## Alonzo

- Severe brain damage as child
- Can not read, write, or calculate
- Speech very limited

1464

Psychology 402 - Fall 2024 - Dr. Michael Dohr

## Standard Scores

Psychology 402 - Fall 2024 - Dr. Michael Dohr

## Gardner's 8 Intelligences

- logical-mathematical (\*)
- verbal-linguistic (\*)
- spatial (\*)
- musical
- bodily-kinesthetic
- naturalist
- interpersonal
- intrapersonal

1467

Psychology 402 - Fall 2024 - Dr. Michael Dohr

## Sternberg's Intelligences

- analytic (\*)
- creative
- practical

1468

Psychology 402 - Fall 2024 - Dr. Michael Dohr

## # of Factors

Researcher	# of Factors	Comment
Binet	multiple	for practical reasons, only measured 1
Spearman	g	acknowledged other smaller factors (S <sub>i</sub> )
Thurstone (et. al)	g <sub>f</sub> , g <sub>c</sub>	fluid vs. crystallized
Sternberg	3	analytic, creative, practical
Gardner	8	"multiple intelligences" (MI) theory

1469

Psychology 402 - Fall 2024 - Dr. Michael Dohr
