

## Week 5

- KW Chapter 6 : Neuroimaging
- KW Chapter 10 : Neocortex

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

1

## Chapter 6 : Imaging The Brain

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

2

## Brain Imaging Techniques : Overview

- Electrical
  - Recording
    - Single Cell, Multiple Cell
    - EEG, ERP
  - Stimulation
- Magnetic
  - Recording - MEG
  - Stimulation - TMS
- Structural
  - X-ray, MRI
- Dynamic / Functional electrical activity
  - metabolism / glucose
  - blood flow, other

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

3

## Single-Cell recording

- Typically done in non-human animals
- Single electrode recording
- Arrays of electrodes
  - record from multiple cells

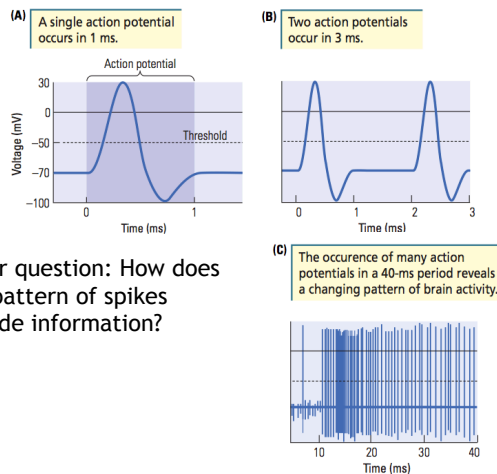

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

4

## Action potential trains

- Major question: How does the pattern of spikes encode information?

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

5

## Neuronal Code

- Patterns of neuronal firing
  - steady rate (e.g. “heartbeat” or time counter)
  - bursts, associated with behavior
  - rarely fire at all
  - daily, monthly, or yearly patterns
- How does the pattern of action potentials encode information?
- Example: Pain fibers in the PNS use frequency encoding:
  - low frequency : mild pain
  - high frequency : severe pain
- Example: color sensitive neurons
  - medium frequency : no color
  - low frequency : green
  - high frequency : red

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

6

## Findings re: Neuronal Code

- Cortical neurons
  - fire about 3x/minute, up to 10x/minute when excited
- Adjacent Neurons may have completely different function
  - e.g. Broca's area: neuron for word perception next to one for word production
- Learning :
  - Newly learned information/skills - requires lots of neurons
  - Old information : more sparsely encoded

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

7

## Levels of Processing / # of neurons

Friday, February 14, 14

8

## Levels of Processing / # of neurons

- Sensory input - few to many to few neurons
    - Retina
      - photo-sensitive cells : many, capture low level features (Light & Dark)
      - >
      - ganglion cells : fewer
      - >
      - LGB cells : even fewer
      - >
      - A17 (V1) Primary visual cortex : more cells, respond to visual features (line orientation)
      - >
      - association cortex : many more cells
- "Grandmother!"

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

9

## Multiple Neuron Recording : EEG

- Neurons fire in synchrony
- Tiny voltages + many many neurons = measurable voltage on the scalp
- EEG : Electroencephalogram

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

10

## EEG Patterns

- Majority of EEG signal comes from neurons in Layers V and VI
- Pacemaker cells keep these cells synchronized
- Frequency & pattern :
- Faster, smaller, & more complicated with increasing arousal
- Slower & larger amplitude in sleep, coma

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

11

## Epilepsy

- Seizure
  - large groups of neurons firing all at once
  - out of control
  - pattern spreads
  - can involve entire brain
- Key
  - 1=pre
  - 2=onset
  - 3=clonic
  - 4=coma
- Note largest spikes in RO area - source of seizure?

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

12

## ERP - Event-Related-Potentials

- Can you see “thinking” by watching EEG?
- In a single recording: No, it's too noisy
- By statistically averaging multiple events, a pattern emerges

Friday, February 14, 14

13

## Common ERP patterns

- (P)ositive and (N)egative waves
- Early waves in brainstem (I, II, III, IV, V, VI)
- Later waves in cortex (N<sub>0</sub>, P<sub>0</sub>...N<sub>3</sub>, P<sub>3</sub>)
- Image: ERP in Parietal Cortex in response to spoken word

Friday, February 14, 14

14

## Multi-electrode ERP

- An individual's event-related potentials (ERPs) to tones in a simple tone counting task. Right column plots ERPs at 26 scalp electrodes (negative is up). Voltage is represented in color on the cartoon head (cool=negative, warm=positive). Time (in seconds) is printed at the bottom of the column of ERPs. Most prominent ERP deflection is the auditory N1 that peaks around 100 ms post-stimulus.

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

15

## MEG : magnetoencephalography

- Maxwell-Faraday equation - relates change in Electrical potential (voltage) “E-field” to change in magnetic field “B-field”
- Electrical voltages : can be measured with cheap equipment
- Magnetic fields : measured with fancy equipment
  - SQUIDS : Superconducting quantum interference device
  - Requires liquid helium
  - \$\$\$
- Pro: higher resolution

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

16

## Brain Stimulation

- Electrical
  - Surface
    - often used in brain surgery
  - Intracranial
    - DBS - Deep Brain Stimulation - mostly experimental, used for Parkinson's treatment
    - Very invasive - risks of infection, etc.
- Magnetic
  - TMS : transcranial magnetic stimulation

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

17

## Transcranial Magnetic Stimulation

- TMS - new, still being researched
- very strong magnetic fields are created in the brain
- magnetic fields cause electrical currents in brain tissue
- mechanism - unknown

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

18

## X-Ray techniques

- X-rays : very high frequency (small wavelength) waves
- Ionizing!

### THE ELECTROMAGNETIC SPECTRUM

Friday, February 14, 14

19

## X-Ray Procedures

- Conventional - simple xray of the skull - shows gross features
- Contrast techniques
  - Pneumoencephalograph y - *air-brain-graph* - inject air into CSF for contrast
  - Angiography - inject material into blood which blocks xrays
- CT

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

20

## CT : Computed Tomography

- Xrays are sent through head from all angles
- Computer reconstructs data into 3-D image
- Aka "Computed Axial Tomography" or CAT scan

(A) CT scan  
Lesion

(B) Horizontal section  
Anterior  
Posterior

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

21

## Neuroimaging

- Visualizing the brain *in vivo*
- CT : Computed Tomography
  - xray
  - cheap(er), quick
  - low resolution
- PET : Positron Emission Tomography
  - radioactive injection
  - tag chemicals to image

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

22

## PET Scanner

A small amount of radioactively labeled water is injected into a subject. Active areas of the brain use more blood and thus have more radioactive labels.

Positrons from the radioactivity are released; they collide with electrons in the brain, and photons (a form of energy) are produced, exit the head, and are detected.

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

23

## MRI

- MRI : Magnetic Resonance Imaging
  - magnetic fields
  - detailed
  - expensive
- fMRI : Functional MRI
  - metabolism in real time

(B) fMRI responses

Normal readers

Dyslexics

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

24

## MR - Spectroscopy

- MRI normally images hydrogen molecules in water (80% of the brain) - Can't see other 20%
- MR Spectroscopy - uses different RF frequency to image non-water chemicals
- Experimental
  - e.g. can detect choline (precursor to Acetylcholine)

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

25

## MR - DTI - Diffusion Tensor Imaging

- measures directional movements of H<sub>2</sub>O molecules
- in ventricles & cell bodies: water molecules are random
- in nerve fibers, water moves along axis of fiber

**Figure 6.24**

**Diffusion Tensor Images of the Language Pathways Connecting Broca's and Wernicke's Regions**

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

26

## Comparison of Neuroimaging images

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

27

## Imaging Comparison

Kind	Time	Resolution	Cost	Risk	Detect Function?
Xray - Conventional	fast	very low	\$	☠	✗
Xray angiography	slow	high	\$\$	☠ ☠	✗
Xray - CAT	medium	medium	\$\$	☠ ☠	✗
PET	slow	low	\$\$\$	☠ ☠	✓
MRI	slow	high	\$\$		✗
fMRI	slow	high	\$\$\$		✓

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

28

## Chapter 10 : Neocortical Function

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

29

## Case Report : Hemispherectomy

- AR, an 11 year old boy began developing seizures
  - right-sided weakness, difficulty talking (dysphasia)
- Over next six years, hospitalized many times
  - Right handed -> left handed
  - by age 15, IQ dropped 30 points (from 100 to 70)
  - by age 17, he was not testable due to emotional & language problems
- Dx : Rasmussen's Encephalitis
- Tx : removal of most of left hemisphere

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

30

## Case Report : Hemispherectomy

- Note: image is from another patient with a Right-hemispherectomy

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

31

## Case Report : Hemispherectomy

- Recover post hemispherectomy
- 10 years later
  - oral language skills : vastly improved (to average)
  - unable to read or write
  - motor skills : improved
    - could walk (with limp)
    - could raise right arm to shoulder level and grasp objects with right hand

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

32

## How did AR recover?

- Levels of Function
  - Subcortical areas manage, direct, and control cortical areas
- Brain Plasticity
  - brain can respond to injury / damage / dysfunction
  - in AR's case: dysfunctional LH blocking language functions in RH. With LH removed, RH could work better and grow back some functions.

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

33

## Levels of Function

Level	Function
<b>Cortex</b>	<b>Control and Intention:</b> Sequences of voluntary movements. Cognitive maps, relationships between objects, emotional values, motivation, long term planning
<b>Basal Ganglia</b>	<b>Self Maintenance:</b> Coordinates voluntary and automatic movements for self-preservation (simple eating, drinking, sex)
<b>Diencephalon hypothalamus thalamus</b>	<b>Affect and Motivation:</b> Voluntary movements, but without purpose. Integrated emotional behavior, but mis-directed. Thermoregulation.
<b>Midbrain</b>	<b>Spontaneous Movement:</b> Simple motor responses to visual/auditory stimuli. Automatic behavior (grooming). Stand, walk, turn, jump in response to stimuli.
<b>Hindbrain</b>	<b>Postural Support:</b> hiss, bite, growl, chew, lick in response to stimuli. Standing, postural reflexes, sleepwalking.
<b>Spinal cord</b>	<b>Reflexes:</b> stretch, withdraw, scratch in response to stimuli

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

34

## Decorticate Rats

- Decorticate rats behave in many ways normally
  - eat, drink
  - can run simple mazes
- Untrained observers have difficulty telling them apart from a rat with a cortex
- Decorticate rats
  - don't build nests
  - do not hoard food
  - can't do skilled movements with tongue & mouth
  - can do simple learning

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

35

## Cortex - what is it good for?

- Conclusions : Neocortex not necessary for basic survival
- Neocortex is a "new layer" evolutionarily developed
- Manages complex and new combinations of behavior

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

36

## Cortical Mapping Ideas

- Brodmann's Map
- Primary/Secondary/Tertiary
- Developmental
- Primordial zone
  - myelinates early : part of motor & somatosensory cortex
- Secondary zone (borders primordial zone)
  - myelinates next
- Tertiary zone (association)

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

37

## Cortical Neuron Types

- Spiny
  - has dendritic spines
- Examples:
  - Pyramidal cells
    - pyramid-shaped
    - 75% of all neurons
    - efferent (project out of brain, e.g. motor neurons)
  - Stellate cells
    - star-shaped

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

38

## Cortical Neuron Types

- Aspiny
  - no dendritic spines
  - Inhibitory, use GABA and also use other NTs
  - diverse shape & chemistry
- Examples:
  - basket cell
- Columns:
  - cells in vertical arrangement mostly talk to each other

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

39

## Cortical Columns

314

Friday, February 14, 14

40

## Cortical Columns, Spots & Stripes

- Cortical neurons function in narrow columns
- Up to 300 neurons in 1mm wide strip
- "Column" or "Module"
- How determined?
  - radioactive staining - inject tagged AA into eyeball
- Not widespread agreement on definition or function

(A) Ocular dominance columns in area 17

(C) Stripes in area 18

(B) Blobs in area 17

(D) Barrels in area SI

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

41

## Representation & Mapping

- Early views
  - brain areas have mapping to specific topics
  - e.g. motor cortex maps to body muscles
  - sensory cortex maps to skin receptors
- Later research
  - found multiple maps in many parts of the brain
  - e.g. monkeys: approx 30 areas mapping to vision
  - found multimodal / polymodal areas
  - combining sensory / motor information
  - found maps are widely distributed / general (not as localized as thought)
- Conclusion:
  - # of maps --> amount of "intelligence" ?

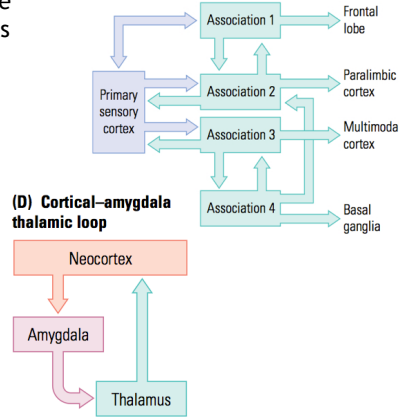

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

42

## Cortical Systems & Subcortical Loops

- Cortex connections can be divided into 5 major areas

- Subcortical connections form loops between subcortical and cortex (6 major ones discovered)

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

43

## The Binding Problem

- How does the brain integrate sensory perception into a *gestalt* (a “whole”)
- Possible solutions
  - A top-level cortical area binds them together
    - problem - this doesn't seem to exist
  - All areas are interconnected and share information
    - problem - not all areas are connected
  - Intracortical networks among subsets of regions
    - may actually be how the brain works?
    - called “integration”
- Still not really solved

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

44

## A Hierarchical Model : Structure

- Alexander Luria's model
- Cortex : two parts
  - posterior : sensory
  - anterior : motor
- Each part has 3 zones:
  - primary
  - secondary
  - tertiary (association)

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

45

## A Hierarchical Model : Function

- Processing is serial:
  - posterior (1,2,3) --> anterior (3,2,1)

### (B) Motor unit

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

46

## Luria's model : accurate?

- Problems
  - serial connections may not exist
  - subcortical connections bypass cortex
- Newer models:
  - still hierarchy, but some levels bypass each other
  - includes parallel processing.
- “Distributed Hierarchy”

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

47

## Are Humans Special?

- Do Human brains have any unique properties?
- Biological, Psychological and Theological Question
- Human brains have
  - High density of neurons with fast conduction velocity
    - > increased processing capability
  - Von Economo Neurons
    - large bipolar neurons in cingulate cortex (also seen in great apes, but to a lesser extent)
    - develop around age 4
      - might hold “theory of mind”?
      - defective in Autism?

Psychology 465 - Human Neuropsychology - Spring 2014

Friday, February 14, 14

48
